## 🔗 Profile

Robotics and Automation Engineer with hands-on experience in Autonomous Guided Vehicles (AGVs), ROS 2, SLAM, AI-driven perception, and warehouse automation. Experienced in sensor integration, autonomous navigation, robot deployment and WMS integration. Passionate about developing intelligent robotic and drone systems using computer vision, machine learning, and autonomous navigation technologies.

## 🧠 Key Skills

- **Programming Languages:** Python, C, C++, R, Bash
- **Robotics & Autonomous Systems:** ROS 2, Gazebo, RViz2, SLAM, Autonomous Navigation, Path Planning
- **Drone Technologies:** PX4 Autopilot, ArduPilot, MAVLink, MAVSDK, Swarm Coordination
- **Computer Vision:** OpenCV, MVS SDK, YOLOv8
- **AI & ML:** Reinforcement Learning & Deep Learning, TensorFlow, Keras, PyTorch
- **Embedded Systems & Controllers:** Arduino, Raspberry Pi, SRC 2000, Flite controllers
- **Industrial Automation:** PLC Fundamentals, Robotics Sensors, Actuators, Industrial Communication Protocols
- **CAD & Design:** SolidWorks, AutoCAD
- **Development & Collaboration Tools:** GitHub, VS Code, Google Colab, RoboShopPro, RDS, WMS, AntigraVity
- **AI:** web & App development, New AI creations, R&D Etc.
- **Languages Known:** English, Hindi, Marathi, Kannada.

## 💼 Work Experience

### Robotics Engineer in Savira Systek

08/2025 – 06/2026

- Specialized in AGV systems with a focus on SLAM for autonomous navigation and mapping.
- Integrated AGVs with Warehouse Management Systems (WMS), optimizing goods movement and reducing human intervention.
- Led site preparation for AGV operations, ensuring proper pathways, charging stations, and operational zones.
- Used RoboShopPro for AGV path testing and optimization before deployment.
- Proficient in RDS (Robot Dispatched System) for AGV simulation and testing.
- Conducted on-site testing, troubleshooting, and calibration of sensors (LiDAR, cameras) for precise navigation in dynamic environments.
- Performed AGV path optimization using RoboShopPro and RDS simulation tools, improving operational efficiency by 20%

## 🎓 Education

Visvesvaraya Technological University – Belagavi  
**Bachelor of Technology in Robotics and Automation**

Motichand Lengade Bhartesh Polytechnic – Belagavi  
**Diploma in Mechatronics**

2021 – 2024  
7.3/10 CGPA

2017 – 2020  
Diploma 72%

## 🔧 Projects

1. **Drone Pipeline and Multi-Agent Mission Generation (Swarm Coordinator)**
  - Developed a multi-drone mission planning system for autonomous task execution.
  - Implemented swarm coordination strategies for synchronized drone operations.
  - **Technologies:** Python, ROS 2, PX4, MAVSDK, LLM APIs, llama
2. **Autonomous Vision-Based Drone Follower with SLAM Navigation**
  - Developed an autonomous drone capable of following a target using computer vision.
  - Integrated SLAM for real-time localization and autonomous navigation.
  - **Technologies:** OpenCV, Python, ROS 2, PX4, YOLOv8, API
3. **AI Chatbot using RAG (Retrieval-Augmented Generation)**
  - Built an AI chatbot capable of retrieving domain-specific information using Retrieval-Augmented Generation.
  - Integrated LLM-based responses with document retrieval.
  - **Technologies:** Python, LangChain, Vector Database
4. **Raspberry Pi-Based Slotting Machine with Robotic Arm**
  - Designed and developed a robotic arm-based slotting machine controlled by Raspberry Pi.
  - Automated pick-and-place operations using embedded programming.
  - **Technologies:** Raspberry Pi, Python, Embedded Systems
